

Outfeed Belts for DSI Portioners™ from Keystone Manufacturing

conveyor belt **fast facts**

- 1/2 the price of belts from the OEM
- More consistent belt pitch
- Full hard temper stainless rods

DSI Portioner™ machines utilize a special True 1/2" x 1/2" mesh, flat wire belt to convey product through the machine. These belts feature full-hard temper stainless steel connecting rods for longer life under the water jet. They also have slotted holes so the belt can collapse for easy cleaning. Most importantly, Keystone offers the most consistent belt pitch in the industry. Because Keystone slits and edges our own strip steel, we can control the consistency of our belt pitch better than anyone else.

This translates to longer belt life and less rejected product.

keystone **advantage**

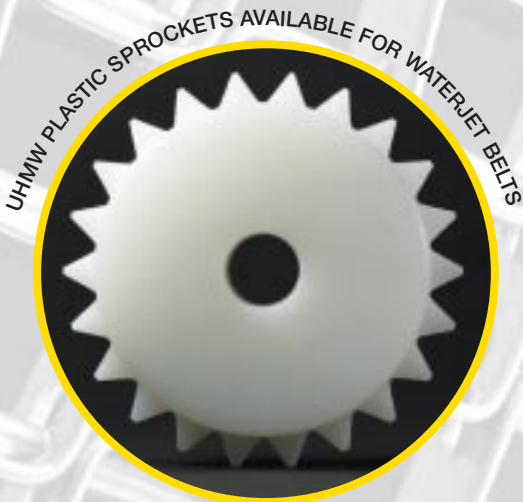

- Commitment to customer service and quality products
- Loyal customer base
- Honest and reliable partner
- Fast deliveries, large inventory

For 105 years, Keystone Manufacturing Inc. has been an honest and reliable partner with a commitment to customer service and quality products. Keystone carries the largest inventory of flat wire belts in the world and we consistently meet or beat our customer's expectations for delivery.

waterjet belt **specifications**

KEY-TURN™ BELTS FOR SPIRAL FREEZERS

Keystone is a trusted source for metal spiral freezer belts to both original equipment manufacturers and end users.

Key-Turn™ belts are interchangeable with Omni-Flex® and Cambri-Link® belts.

Spiral freezers are an extremely critical component of a food manufacturer's facility. Keystone is well aware of this and the need for absolute quality and accuracy. Keystone takes great care during the production process to ensure this quality.

- We inspect each belt for compression and belt pitch
- Welded connecting rods are buffed and polished
- Reinforcing links available in .062" and .090" thicknesses
